

To the Canada Post Strategic Review Panel

The postal system in this country provides a liveable wage for residents of small and large localities.

Please take this opportunity to “add” foot bound letter carriers to towns with red boxes (CMBs) as it will eliminate fuel use by millions of Canadians, and reduce fuel and maintenance costs for Canada Post Corporation.

Move the newer “red” boxes to country locations that still require the replacement of ancient green boxes, give towns like Grand Forks B.C. or Exeter Ontario door to door service to assist our aging population.

This move will of course greatly assist Canada's efforts to meet Kyoto, as it removes millions of autos from the street daily, while giving the public the secure service they want.

A cold Canadian winter deserves door to door service, not ten minutes of warming up the car in order to drive 4 blocks to retrieve mail.

Canada Post has a chance to have a very positive effect on the environment and for the people of this great country, please don't shred the very fabric of our towns for an increase in Corporate profit.

Thank you for your time,

Bruce Northcott

B.C.
